

KAZI YOUSUF

AI Video Production | Character-Consistent Explainer & Ad Creatives

kaziyy999@gmail.com
Available full-time, remote

SUMMARY

AI video creator running a structured, end-to-end production pipeline — script to voice to generated shot to final cut, solo. Focused on character consistency across shots and literal word-to-visual sync: if a line says a specific action happens, the visual shows exactly that, not generic mood-matching motion. Comfortable working independently from a brief with minimal creative direction. Full-time and available immediately.

SKILLS & TOOLS

- **AI Video Generation:** MiniMax H3 (primary — fastest, ~3–4 min per shot), Wan 2.2 14B I2V (fallback, local via ComfyUI), Veo 3.1 / Veo 3.1 Lite (hero shots, native in-shot dialogue), Google Flow / Nano Banana Pro (character locks, reference images)
- **Local Infrastructure:** ComfyUI self-hosted (Ryzen 5 7500F, RTX 5060 8GB VRAM, 32GB DDR5) — shots generated locally at no per-shot API cost
- **Editing & Post:** CapCut, Premiere Pro 2026, DaVinci Resolve Studio 21
- **Voice & Audio:** ElevenLabs AI voiceover; native Veo 3.1 in-shot dialogue
- **Pipeline & Tooling:** CineFlow (self-built) — automates voice timing, prompt generation, and CapCut draft assembly; structured prompt engineering; locked character blocks; shot planning; script breakdown
- **Ad Formats:** UGC-style ads, DTC product ads, narrative/microdrama video, direct-response creative (hooks, CTAs)
- **Other:** Git/GitHub, Next.js (built and deployed own portfolio site), Linux basics

PROJECTS & PRODUCTION EXPERIENCE

UGC Talking-Head Ad Campaigns — Creator — Completed

Self-Initiated Portfolio Project

- Produced two fully edited UGC-style ad videos with a locked photorealistic spokesperson character
- Video 1: four-shot DTC spec ad (~29s) — hook, problem, product reveal, CTA
- Video 2: a second DTC-style ad cut with the same locked character
- Pipeline: Google Flow for character lock, Veo 3.1 Lite for per-shot generation, CapCut for edit

The CEO's Forbidden Assistant — Creator — In Production

Self-Initiated Microdrama Series

- Two-character vertical (9:16) microdrama; Episode 01: nine shots, ~62s of raw footage, cutting toward a 60–70s final
- Hero reference images locked in Nano Banana Pro; each shot generated in Veo 3.1 with dialogue voiced natively in-shot
- Currently in edit

Spec Ad Portfolio (6-Ad Series) — Creator — In Production — 2 of 6

Self-Initiated Portfolio Project

- Building a six-ad spec portfolio (three SaaS: FlowStack, PitchBird, LedgerLoop; three DTC: SLUMBR, LUMENA, FetchBox) with one locked 2D-illustrated character across all six
- Opens with a 74-second intro reel introducing the locked character ahead of the individual ad cuts
- Vertical 9:16, five shots per ad, Wan 2.2 14B I2V pipeline
- Ads one (FlowStack) and two have completed demo cuts live on the portfolio site — four more scoped

Blindside Effect — AI Video Producer — In Production

YouTube Explainer Channel | July 2026 – Present

- Produce a weekly psychology and cognitive-bias explainer series — script, voice, and edit end-to-end, solo
- Built and maintain a locked bear-mascot character system (prompt block + expression/pose bank) for visual consistency
- Five episodes published to date covering behavioral effects (Dunning-Kruger, the Halo Effect, Murphy's Law, and more)
- A separate discipline from the AI-generated character work above — scripted, recorded, and cut by hand
